

2007-2009 Jeep Wrangler (JK) Rear Track Bar Braces

NEW

Weld-on brace now included with lift. Bolt-on bracket with integrated brace is optional.

Some JKs have experienced factory weld failure where the factory rear track bar bracket attaches to the axle housing. At some time in 2008 Chrysler strengthened the weld area; we have not been able to verify an exact date. Considering this potential "weak link", Superlift now includes a weld-on brace with Superlift 4" lifts and Black Diamond 3" lifts packaged as of February 1, 2009. The weld-on brace can also be used on a stock JK, or a lifted JK that is returned to stock height.

An optional track bar bracket, with an integrated bolt-on brace, is offered for those not wanting to weld.

Both braces should be compatible with other brands of 2" to 4" suspension lifts, although the parts must be fit-checked to verify.

WELD-ON

BLACK DIAMOND PART #810590
SUPERLIFT PART #5730

BOLT-ON

BLACK DIAMOND PART #810591
SUPERLIFT PART #5731
