

Description:

Electronic Geometry Recalibration (EGR) Module - The Grand Cherokee and Commander were some of the first vehicles to include Jeep’s Electronic Stability Program (ESP). Creating a true performance lift system with ESP compatibility has been a stumbling block for most suspension manufacturers. Superlift relies on our exclusive Electronic Geometry Recalibration (EGR) module, produced by AEV, to provide the properly calibrated steering input signal to the factory ESP unit. The EGR module also allows for speedometer recalibration, desired when taller height tires and / or different axle gear ratios are installed. The module simply plugs into an existing wiring harness located beneath the dash. Use only with the Superlift Grand Cherokee and Commander 4” lift systems.

Applications:

Fits 2005-2007 Jeep Grand Cherokee and Commander (both 2WD and 4WD). Vehicle must be equipped with Superlift 4” lift system.

Note: Neither lift system nor EGR module fits 2008 models. Estimated release for 2008 model product is summer, 2008.

Part Number:
5154

Is it in current Superlift catalog #115?
Yes (pgs 54, 194, 195)
