

2.5", 4" and 6" Lifts for 2009 4WD Dodge 1500 DS...NOW SHIPPING

An all-new factory coil spring / 4-link rear suspension mated to Dodge's existing coilover strut front suspension has resulted in exceptionally good ride quality and control. With Superlift's 4" and 6" lift systems, this "best in class" driveability remains intact, or arguably, it's actually improved upon. Front lift is via your choice of strut towers (less expensive and easier to install), or Bilstein replacement strut cylinders, which noticeably improve handling at higher speeds.

6" Lift with 37x12.50x20 BFG tires on 20x9.5" wheels with 5" back spacing

SHOCK OPTIONS

4" and 6" Lift Systems' Features:

- Front lift choice of new strut towers (no strut disassembly required), or replacement Superide Select SS series gas monotube strut bodies by Bilstein.
- Replacement knuckles yield best possible alignment specs. Front track width is not increased and factory turning radius is retained.
- Front lower control arm crossmembers laser cut from 3/16" material.
- Belly pan, constructed of 1/4" material, connects crossmembers and protects differential.
- Retains front anti-sway bar link extensions factory "service for life" links.
- New Superide Dual Rate rear coil springs provide ideal ride, handling and load carrying capability.
- New bracketry relocates factory rear 4-link points, anti-sway bar links, brake lines and track bar.
- New longer rear compression travel-stop brackets.
- Installs easily with only slight trimming and no exhaust or driveshaft modifications.
- Compatible with Dodge's Electronic Stability Program.

TRX4 Model - Both Superlift's 4" and 6" systems will fit Dodge's TRX4. Some additional Superlift components are needed if using the strut spacer lift version (see Application Chart for details). Note that the TRX4 factory ride height is approximately 1" taller than the standard DS, so you will gain 1" less lift than stated. When lifted, the standard DS and the TRX4 ride height is the same.

Our 2.5" Level-It front lift system must not be installed on TRX4 models.

2.5" Level-It Kit

2.5" Level-It kit allows the use of both 17" and 20" factory wheels and makes room for up to 35" tall tires. Must not use with TRX4 model.

4" Lift

4" Lift clears up to 35 x 12.50 tires on 18" wheels with a maximum backspacing of 5", or 35 x 12.50 tires on 20" wheels with a maximum backspacing of 5.5".

6" Lift

6" Lift clears up to 37 x 12.50 tires on 18" wheels with a maximum backspacing of 5", or 37 x 12.50 tires on 20" wheels with a maximum backspacing of 5.5".
